

Syed M. Ghani

Full-Stack Software Engineer | Ruby on Rails | React.js

devsyed.ghani@gmail.com • +92 309 020 4019 • Lahore, Pakistan • LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Full-Stack Engineer who has shipped and owned a production SaaS platform end-to-end — not just contributed to one. Currently a **Senior Software Engineer at Stackworx**, building the Rails + Shopify platform for Midway Sports: an out-of-stock case-resolution system, multi-vendor inventory ingestion, and returns processing. Previously, as the **sole engineer** on CinnaLab PRM at Blackstack, built the entire system from zero to production in **8 months**: React/Rails architecture, bi-directional CRM sync with two major platforms, a zero-data-loss billing migration, and a multi-role auth system that ran with **zero critical incidents and zero auth issues**. Across **6 SaaS products** in AI/PRM, fintech, ed-tech, e-commerce, and college athletics, the pattern repeats: given ambiguous scope, ships working production systems, not prototypes. Also maintains **4 open-source Rails gems** with **7,001+ combined downloads** — tooling other engineers actually use.

TECHNICAL SKILLS

Backend: Ruby on Rails 5/6/7, REST APIs, ActiveRecord, PostgreSQL, MySQL, Redis, Sidekiq, ActiveJob, OAuth 2.0, multi-tenant architecture, Hotwire (Turbo Drive, Turbo Frames, Turbo Streams), Stimulus.js, ActionCable (WebSockets, Rails channels)

Frontend: React.js, JavaScript ES6+, Material UI, TailwindCSS, React Query, Redux Toolkit, React Router v6, responsive design

Rails Gems: Devise, Pundit (RBAC), Kaminari, ActiveAdmin, FactoryBot, RSpec, rails-guarddog

Payments: Stripe, Paddle, Chargebee (subscriptions, webhooks, platform migrations)

Integrations: HubSpot, Salesforce (bi-directional sync), Shopify (GraphQL Admin API, webhooks, embedded apps), QuickBooks Online, Moodle LMS, Documenso

Testing & DevOps: RSpec, Jest, GitHub Actions CI/CD, AWS (IAM, VPC, EC2, RDS, S3, CloudWatch), Docker, Heroku, Linux, zero-downtime migrations

Security: rails-guarddog (SQL injection, XSS, secrets, unsafe redirects, mass assignment detection)

Currently Learning: Django, deeper AWS (Lambda, ECR), containerized deployments

Open Source: **4 published gems** (7,001+ downloads): rails-persona, rails-tenantify, rails-css_unused, rails-guarddog

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Aug 2026 – Present

Stackworx · Lahore, Pakistan · On-site

Midway Sports Sneaker/Footwear E-Commerce Platform · Rails 7.2 + Shopify

- Built the out-of-stock (OOS) case lifecycle end-to-end, by wiring a Shopify webhook to case creation and customer self-service replacement/refund resolution via Shopify GraphQL mutations, with automated day-8 auto-refunds and reminder emails requiring no staff approval in the common path.
- Kept a permanent case audit trail separate from live staff alerts, by pairing a hand-rolled activity log with the Noticed gem for per-user notification state, both fed from a single logging choke point over Turbo Streams.
- Unblocked inventory ingestion across non-standardized vendor file formats, by building per-vendor file parsers feeding a daily job that flags SKUs that never resolved to a product.
- Isolated Nike/Jordan dropship tracking (headless-browser scraping) onto its own Sidekiq worker process, so a scraping backlog can't starve routine inventory and order jobs on the shared queue.

Software Engineer

Aug 2024 – May 2026

Blackstack Software Solutions · Product studio, Lahore Role ended in a company-wide downsizing; not performance-related.

CinnaLab PRM AI-Powered Partner Relationship Management · Sole Engineer

- Shipped an entire partner relationship management platform to production in **8 months** as the sole engineer, by architecting both the React.js/Material UI frontend (onboarding, deal registration, lead scoring, e-learning, per-company theming) and the Rails/Sidekiq backend end-to-end.
- Ran multi-role access control and live notifications in production with **zero critical incidents and zero auth issues**, by building a Devise + Pundit RBAC system and ActionCable-powered WebSocket notifications with no polling.
- Eliminated manual data entry** between CinnaLab and two major CRMs, by building bi-directional HubSpot/Salesforce sync with conflict resolution, idempotent jobs, and retry/DLQ handling.
- Migrated the platform's entire subscription billing system with **zero data loss and zero customer disputes**, by executing a full Paddle→Chargebee cutover across subscriptions, billing cycles, and webhook verification.
- Removed recurring third-party SaaS licensing costs for e-signature and LMS tooling, by self-hosting Documenso and Moodle from source into production with SSO and secure Rails iframe embedding.

Intercollegiate College Athletics Job Board · 2,500+ Listings

- Cut search response time by **40%** on a 2,500+ listing job board, by redesigning multi-dimensional faceted search (sport, division, salary, geolocation) with optimized PostgreSQL indexing.

- Increased profile engagement and job discoverability for recruiters and athletes, by shipping profile claiming, "who viewed" analytics, related-job recommendations, saved searches, and an ActiveAdmin recruiter dashboard with Turbo Frames/Streams real-time filtering.

Controllr / Monthend Month-End Finance SaaS

- **Eliminated manual reconciliation lag** in month-end close, by building a real-time ingestion pipeline from emails, receipts, and construction platforms with automated GAAP job-costing.
- Ran multi-entity account syncing in production with **zero reconciliation errors**, by building a bi-directional QuickBooks Online integration.
- Delivered live, no-refresh updates across five core app modules (Transaction Inbox, Projects, Accounts, Vendors, Settings), by building the UI in React.js with Turbo Streams for real-time CRUD.

Docyt AI Bookkeeping SaaS · Microservices **Reduced billing support escalations** post-launch for hospitality/SMB payment lines, by building a Stripe subscription microservice from scratch with idempotent webhooks, failure recovery, and PCI-aligned handling.

Research & Development Intern Sep – Nov 2023
Al-Khawarizmi Institute of Computer Science (KICS), UET Lahore Applied research support at KICS; contributed to ongoing R&D initiatives within the institute.

Web Development Intern Jun – Aug 2023
Apex Space, Lahore Developed full-stack features for client web applications; code reviews, daily standups, bug fixes, production deployment support.

OPEN SOURCE PROJECTS

- rails-guarddog** (v0.1.8) — Rails security scanner: SQLi/XSS/secrets/mass-assignment detection. [GitHub](#) · [RubyGems](#)
- rails-tenantify** (v0.1.2) — Row-level multi-tenancy for Rails 7+: model/controller scoping, Sidekiq propagation. [GitHub](#) · [RubyGems](#)
- rails-persona** (v0.2.7) — Activity-tracking DSL: frequency, recency, inactivity queries. [GitHub](#) · [RubyGems](#)
- rails-css_unused** (v0.2.1) — CSS optimizer: unused-selector detection across ERB/HAML/Slim/Stimulus. [GitHub](#) · [RubyGems](#)

Combined downloads across all four gems: 7,001+.

EDUCATION

B.Sc. Computer Science 2020 – 2024
University of Engineering & Technology (UET), Lahore FYP: Urdu Signify—Urdu-to-Sign-Language animation system (GANs/NLP)
