Sprint Delivery

PROFESSIONAL SUMMARY

Full-Stack Software Engineer (Ruby on Rails + React.js) who has shipped and owned production SaaS platforms end-to-end, entirely async and without on-site supervision. Currently a **Senior Software Engineer at Stackworx**, building the Rails + Shopify platform for Midway Sports: an out-of-stock case-resolution system, multi-vendor inventory ingestion, and returns processing. Previously, as **sole engineer** on CinnaLab PRM at Blackstack, built the complete system in **8 months**: multi-tenant subdomain architecture, bi-directional HubSpot/Salesforce CRM sync, a zero-data-loss Paddle-to-Chargebee billing migration, self-hosted Moodle/Documenso infrastructure, and a full MUI/React frontend — run with **zero critical incidents** since launch. Across **6 SaaS products** in AI/PRM, fintech, ed-tech, e-commerce, and college athletics, delivered **100% on-time** against sprint scope managed purely through written communication with remote product owners. Also maintains **4 open-source Ruby gems** with **7,001+ combined downloads**. GMT+5, 4–5 hr EU overlap, available for US East morning standups. Open to hearing about full-time or contract remote roles alongside the current position.

REMOTE READINESS

Async flow:	Work-	Self-scoped features, wrote specs/PRs, shipped iteratively with full handover docs across 6 remote-managed products—no on-site supervision. 100% on-time sprint delivery, zero critical incidents.
Communication:		GitHub (PRs, issues, code review, project boards), written API contracts, async standups, sprint scope managed entirely via written communication with remote product owners.
Timezone Availability:	&	GMT+5 (Pakistan)—4–5 hr overlap with EU, available for US East morning standups. Open to full-time or contract remote roles.

TECHNICAL SKILLS

Backend:	Ruby on Rails 5/6/7, REST API design, ActiveRecord, PostgreSQL, MySQL, Redis, Sidekiq, ActiveJob, OAuth 2.0, multi-tenant architecture, service objects, Hotwire (Turbo Drive, Turbo Frames, Turbo Streams), Stimulus.js, ActionCable (WebSockets, Rails channels)
Frontend:	React.js, JavaScript ES6+, Material UI (MUI), TailwindCSS, React Query, Redux Toolkit, React Router v6, Vite, responsive/mobile-first UI
Payments:	Stripe, Paddle, Chargebee — subscriptions, billing cycles, webhook verification, failure recovery, payment platform migration
CRM & Integrations:	HubSpot CRM (bi-directional), Salesforce (bi-directional), Shopify (GraphQL Admin API, webhooks, embedded apps), QuickBooks Online (QBO), Moodle LMS (SSO/iframe), Documenso (e-signatures)
Self-Hosted Ops:	Documenso and Moodle deployed from source in production — server config, environment setup, SSO and API integration
Open Source:	4 published Ruby gems — rails-guarddog, rails-persona, rails-tenantify, rails-css_unused — 7,001+ total downloads (rubygems.org/profiles/devsyedghani)
Currently Learning:	Django, deeper AWS (Lambda, ECR), containerized deployments
Rails Gems:	Devise, Pundit (RBAC), Kaminari, ActiveAdmin, ActiveStorage, bcrypt, jsonapi-serializer, FactoryBot, RSpec

Testing & Quality:	RSpec, FactoryBot, Jest, N+1 query optimisation, zero-downtime migrations, code review
Tools & Ops:	Git, GitHub, Linux, Heroku, Docker, AWS (IAM, VPC, EC2, RDS, S3, CloudWatch), Python, Agile/Scrum

PROFESSIONAL EXPERIENCE

Senior Software Engineer · *Stackworx* Aug 2026 – Present
Lahore, Pakistan · On-site. Midway Sports ↗ Sneaker/Footwear E-Commerce Platform · Rails 7.2 + Shopify

- **OOS case lifecycle:** Built the out-of-stock (OOS) case system end-to-end, by wiring a Shopify webhook to case creation and customer self-service replacement/refund resolution via Shopify GraphQL mutations, with automated day-8 auto-refunds and reminder emails requiring no staff approval in the common path.
- **Notifications:** Kept a permanent case audit trail separate from live staff alerts, by pairing a hand-rolled activity log with the Noticed gem for per-user notification state, both fed from a single logging choke point over Turbo Streams.
- **Vendor ingestion:** Unblocked inventory ingestion across non-standardized vendor file formats, by building per-vendor file parsers feeding a daily job that flags SKUs that never resolved to a product.
- **Background jobs:** Isolated Nike/Jordan dropship tracking (headless-browser scraping) onto its own Sidekiq worker process, so a scraping backlog can't starve routine inventory and order jobs on the shared queue.

Software Engineer · *Blackstack Software Solutions* Aug 2024 – May 2026
Remote-compatible product studio · Full-stack ownership across 6 client SaaS products · Async + sprint-based delivery. Role ended in a company-wide downsizing; not performance-related. CinnaLab PRM ↗ AI-Powered Partner Relationship Management · Sole Engineer

- **Solo ownership:** Shipped an entire PRM platform to production with **zero critical incidents**, by self-scoping features, writing specs, and delivering iteratively with full handover docs—entirely without on-site supervision.
- **Frontend:** Enabled per-company branded partner portals across 3 distinct roles (partner, admin, manager), by building dynamic subdomain routing, theme overrides, and role-based rendering in React.js + MUI.
- **Backend & workers:** Replaced polling with real-time delivery for live notifications, by building an ActionCable-powered WebSocket system on a Rails + Sidekiq backend handling webhook processing, CRM sync, email delivery, and a certification state machine.
- **CRM sync: Eliminated manual data entry** between CinnaLab and two major CRMs, by building bi-directional HubSpot/Salesforce integrations with API clients, sync resolvers, and idempotent Sidekiq jobs with retry/DLQ handling.
- **Billing & infra:** Migrated the platform's entire subscription billing system with **zero data loss**, by executing a full Paddle-to-Chargebee cutover. Removed recurring third-party licensing costs by self-hosting Documenso and Moodle (SSO, iframe embedding) from source into production.

Intercollegiate ↗ *College Athletics Job Board · 2,500+ Listings*

- **Search & geolocation:** Cut query time by **40%** across a 2,500+ listing job board, by building multi-dimensional faceted search with geolocation radius filtering and PostgreSQL index optimisation.
- **Features & tooling:** Increased profile engagement and job discoverability for recruiters and athletes, by shipping profile claiming, view analytics, "who's viewed" tracking, related-job recommendations, saved searches, Sidekiq email alerts, and an ActiveAdmin dashboard with Turbo Frames/Streams for real-time filtering.
- **Async delivery:** Delivered **100% on-time** against sprint scope, by managing all deliverables and coordination with a remote product owner entirely through written communication.

Controllr / Monthend ↗ *Month-End Finance SaaS · GAAP + Construction*

- **Real-time ingestion:** Enabled GAAP-compliant job-costing, by building a real-time data ingestion engine centralising transactions from emails, receipts, and construction platforms.
- **QuickBooks sync: Eliminated manual reconciliation lag**, by building a resilient multi-entity bi-directional QuickBooks Online sync pipeline.
- **Core UI:** Delivered live, no-refresh CRUD updates across six core app modules (Transaction Inbox, Projects, Accounts, Vendors, Settings, User Profile), by building the UI in React.js with Turbo Streams.

Docyt ↗ *AI Bookkeeping SaaS · Microservices*

- **Stripe microservice: Reduced billing support escalations** post-launch, by designing and building a Stripe subscription microservice from scratch for hospitality/SMB payment lines, with idempotent webhooks, failure recovery, and PCI-aligned handling.

Research & Development Intern · *Al-Khawarizmi Institute of Computer Science (KICS), UET* Sep – Nov 2023
Lahore

- Developed full-stack features for client web applications. Participated in code reviews, daily standups, bug fixes, and production deployment support.

SELECTED PROJECTS

rails-guarddog [GitHub] [RubyGems]

Static security scanner for Rails—detects SQL injection, XSS, secrets exposure, unsafe redirects, mass assignment. Configurable severity, CI/CD-ready.

rails-tenantify [GitHub] [RubyGems]

Row-level multi-tenancy for Rails 7+—model/controller scoping, ActiveJob/Sidekiq context propagation, bulk-write protection. Maintained alternative to `acts_as_tenant`.

rails-persona [GitHub] [RubyGems]

Activity-tracking DSL for behavioural analytics—define trackable actions, query frequency/recency/inactivity, all stored in the app’s own database.

rails-css_unused [GitHub] [RubyGems]

CSS optimizer—scans ERB/HAML/Slim/ViewComponent/Stimulus templates for unused selectors. BEM support, CI exit codes, zero runtime overhead.

Combined downloads across all four gems: **7,001+**.

Urdu Signify (Final Year Project, UET Lahore) [Portfolio]

GAN-powered Urdu-to-Pakistan Sign Language video animation system (Python, GANs, NLP)—solo end-to-end delivery on a novel deep-learning problem.
